16.98 (30mm diameter). Die axis, 315°.
Author's collection. Ex Spink, 2008.

Obv. Head of Athena, wearing a drop earring and triple crested helmet embellished with an image of Pegasus and foliage, and the forepart of four horses r. on the visor. Curls by cheek and nape of neck. Border of pellets.

Rev. Owl turned partly r., with facing head, perched on an amphora (the usual letter erased by wear). A/ΩΕ on either side of bird. Extensive lettering in the field and, to the right of the bird, the forepart of a lion r.

one on a visit to the Acropolis and kept it as a pet. It may have been a remote descendent of those nesting there in ancient times. The olive is also associated with Athena and with Attica as an important producer of oil. Interpretation of the crescent is more precarious. It may simply represent the waning moon, companion to the nocturnal bird. Its introduction has been linked to the Panathenaic Festival in July – August 514 BC, but this does not accord with more recent research, dating the addition to c. 478 – 470 BC. It has also been linked to the state of the moon at the time of the battle of Salamis in 480 BC, but as Starr has observed, this is 'extremely hypothetical'. Once introduced, the crescent nevertheless remains a feature of the design well into the third century BC.

Another characteristic underlining the importance, in particular, of the Athenian tetradrachm was its sturdy shape. The dies used to strike the plump flans created a convex obverse prone to wear in use, but a reverse with the owl in high relief, protected within a deep concave frame. Curiously, as usually occurs on these coins, the bust of Athena on the coin illustrated is so large that the crest of her helmet is lost off the edge of the flan.

The weight of the coin illustrated, at 17.18g, corresponds with the Euboec/Attic standard of 17.20g for a tetradrachm and 4.30g for a drachm.

0 **Titus Quinctius Flamininus, Consul en 198 et vainqueur de Philippe V de Macédoine en 197.**
Statère d'or, Chalcis (?), 196 av. J.-C. 8,44g. Tête nue de Titus Quinctius Flamininus à droite / Victoire debout à gauche, portant une palme à l'épaule gauche et couronnant de la main droite l'inscription T·QVINCTI placée verticalement dans le champ à gauche. Babelon (Quinctia) 2; Bahrfeldt 9.2 (mêmes coins); Biaggi 9; Calicó 29; Crawford 548/1b; Kent/Hirmer 29; Kraay/Hirmer 579.

*Une monnaie exceptionnelle tant par son importance historique
que son état de conservation. Superbe exemplaire. 250'000.-*

Provient des ventes Leu 81, n° 187 et Leu 93, n° 1.
Ce statère d'or est la première monnaie antique à représenter un Romain de son vivant. Frappée en Grèce à la fin de la deuxième guerre de Macédoine, elle s'inscrit logiquement dans l'évolution du portrait monétaire. Pour les Grecs comme pour les Romains, seuls les dieux peuvent figurer sur les monnaies et ne pas respecter ce principe reviendrait à commettre un véritable sacrilège. Même Alexandre le Grand s'abstint de le faire et il faut attendre 305/304 pour voir le plus «sacré» de ses généraux, Ptolémée, roi d'Egypte et nouveau Pharaon, apparaître sur de rares statères frappés à Alexandrie (cf. NGSA I, n° 117). Philhellène convaincu, Titus Quinctius Flamininus accorde, au lendemain de la défaite macédonienne de Cynocéphales, la liberté aux Grecs d'Europe lors des Jeux isthmiques de Corinthe de 196 et c'est pour honorer divinement leur bienfaiteur que ces derniers auraient émis ces magnifiques statères. D'un style hellénistique parfait, ils présentent la particularité de mentionner une légende latine. Dix exemplaires de cette pièce sont connus à ce jour. Quatre sont conservés dans des musées (Athènes, Berlin, Londres et Paris) et six sont entre des mains privées. Cet exemplaire est indubitablement le plus beau de tous. En 1955, à l'occasion de l'entrée de cette monnaie dans les collections britanniques, R.A.G. Carson, déclara que c'était «l'une des plus notables acquisitions du Département et certainement la plus importante pièce jamais ajoutée aux séries romaines».

Ori di Etruria: alle origini della gorgone da 50 assi

di Massimo De Benetti

I recente riordino del monetiere del Museo archeologico nazionale di Firenze, con il suo primo lavoro dedicato alle monete etrusche, pubblicate nel volume della *Sylloge Nummorum Graecorum*, ha dato l'occasione per una approfondita ricerca di archivio grazie alla quale si sono ricostruite le vicende legate all'acquisizione della maggior parte

aes grave di Volterra e dell'Etruria settentrionale interna) un buon numero di monete della collezione Strozzi, acquistate all'asta nel 1907, e numerosi altri pezzi provenienti da scavi e dal mercato antiquario.

Entre las monedas de la colección del Museo destaca sin duda esta gran pieza de oro del emperador Augusto, pues se trata de un ejemplar único. Está fechada en el séptimo consulado de Octavio, que corresponde al año 27 a.C., precisamente cuando recibió el título de Augusto. El cuidado estilo del retrato del emperador, que tenía por entonces 36 años, sugiere que pudo ser acuñada en un taller griego oriental, quizás Pergamo por la similitud tipológica que presenta con los denarios atribuidos a esta ciudad. El reverso, con la leyenda alusiva a Egipto y el hipopótamo como animal característico del Nilo, conmemora la conquista del país ptolomeico tres años atrás, en el 30 a.C.

Tal como sabemos de otras monedas posteriores de gran valor y tamaño –como las grandes doblas y los centenes–, estas piezas de cuatro áureos, aunque tenían valor monetario como cualquier otra moneda, debieron acuñarse con el fin de servir como piezas de ostentación, utilizadas como obsequios especiales para personas muy cercanas al emperador, funcionarios y oficiales de alto rango, o presentes diplomáticos.

Los múltiples del áureo son piezas extremadamente raras y sólo se documentan en el reinado de Augusto; tan sólo existen tres ejemplares y presentan tipologías distintas. Los otros dos, conservados en el Museo Arqueológico Nacional de Nápoles y en el Museo Arqueológico de Este, se atribuyen al taller gallo de *Lugdunum* y son más tardíos, pues se fechan entre el 2 a.C. y el 4 d.C.

58-169 Base silver nummi of the Roman emperor Diocletian and his co-emperors, about AD 300.

Diocletian established for the first time a uniform coinage throughout the Roman Empire. This was produced at a number of mints, whose products, all showing the 'spirit of the Roman People', are virtually identical except for the mint mark at the bottom of each coin: TRI (Treviri), PLG (Agdunum), R (Rome), T (Ticinum), AQ (Aquileia), SIS (Siscia), TS (Thessalonica), HER (Heraclea in Thrace), KV (Cyzicus), SMN (Nicomedia), ANT (Antioch), and ALEX (Alexandria).
